

# EVERYTHING BUT THE...

## Pick a Product

- Materials
  - Choice of poster board, paper, PowerPoint
  - Writing utensil
  - Research device
  - Colored pencils/markers (optional)
- Procedure
  - After learning about the by products from a species of your choice have students “pick a product” Once they pick one have students either create a PowerPoint, poster, or write a paper on how the product is made. For example, if a student chooses Creams and Lotions from the cattle infographic, they should research how the cattle fat is used to create the cream and lotion. They should also include the process and timeline of the products. They can also include things like, how is cream and lotion used, how much is produced in the u.s. or what percentage is from by-products. Allow students to get creative and learn the why and how behind the by-products.
