

PRODUCTS FROM TREES

Forestry and logging fall under the agriculture industry. Timber is harvested to make products many of us use on a daily basis. All parts of harvested timber are used resulting in zero waste.

Solid wood products

Timber is used to make lumber for building and other uses.

Lumber Process By-Products

When lumber is cut from trees, the by-product is pieces of wood, bark and sawdust.

Wood, bark and sawdust are used to make:

Particle Board

Wood Pellets

Pallets

Musical Instruments

Toys

Pencils

Sports Equipment

Decorative Items

Wood Pulp

Wood is made up of cellulose fibers and lignin (a glue-like substance). Pulping is a chemical and heat process that separates the cellulose fibers from the lignin which results in many products.
